Introduction

Unique treatment modalities, such as equine or animal therapy, adaptive sports, and creative arts, are commonly used for the physical and mental rehabilitation of Veterans. Tracking these treatment modalities allows for accurate assessment of their utilization and impact across the VHA network. Multiple providers across multiple disciplines may also implement their treatments, and visibility to these services will help direct Veteran care. As leadership better visualizes how these programs are being utilized across the network, noting trends in successful programming, leadership will be able to formulate future recommendations and guidance related to treatment plans.

This update contains 32 new health factors that represent these treatment modalities. Your facility can use these health factors to add to local encounter forms for the clinics used or add to local reminder dialog templates used to document these treatments.

UPDATE_2_0_255 contains 1 Reminder Exchange entry:
   UPDATE_2_0_255 VA-RPS HEALTH FACTORS

The exchange file contains the following components:
