RELEASE NOTES
FOR
CPRS GUI VERSION 18
PATCH# OR*3*131

INSTALLATION REQUIREMENTS

Before you can install OR*3*131, you must install the following patches:

- OR*3*116

Internet Explorer 4 or later is also required. Internet Explorer 5 is recommended, and the note template import/export functionality requires it.

BUG FIXES

LAB ORDERS
- If the "How Long" prompt was left blank in a lab quick order, and the ordering provider tried to accept the order without entering a value, the text of the error message was confusing and required a "number of days" in all cases, regardless of the schedule selected. This has been corrected to display a more helpful message.

NOTES/DISCHARGE SUMMARY
- If a user erroneously entered a non-numeric value in the 3rd ";" piece of the "ORCH CONTEXT xxxxxxx" parameter for either of these tabs (especially at the system level) CPRS would fall into an infinite loop and eventually crash. This has been corrected and the tab will default to a display of "All signed notes", and ignore the invalid parameter value.

ORDERS TAB
- If an order was placed by the PS MEDS option and then renewed, the new order belonged to the Pharmacy management package instead of the Inpatient/Outpatient package. This has been corrected.

- If an order was placed by the PS MEDS option for an inpatient and copied and delayed for discharge, the inpatient order dialog displayed instead of the outpatient order dialog. This has been fixed.

- When renewing orders, the DEA# check will only be applied against Pharmacy orders.

- When placing IV/IV Quick orders, the DEA# check should now work properly.

- You can no longer place a conjunction in AND/THEN/EXCET column on the last line of a complex medication order.
